MICRO-CEMENT

Microcrystal Microcement Series

Microcrystal-Microcement is a wall environmental protection material made of macromolecular polymer resin and high-purity silica as the main raw materials. It has the skin texture of traditional two-component micro-cement, provides pure colors with higher saturation and richer hue options. The construction of the material is simpler and less prone to mottled joints. Microcrystal-Microcement is a stable paste-like finished material, no need for multi-component mixing, color grading and construction can be completed at one time.
